## Reference indicators for all individuals

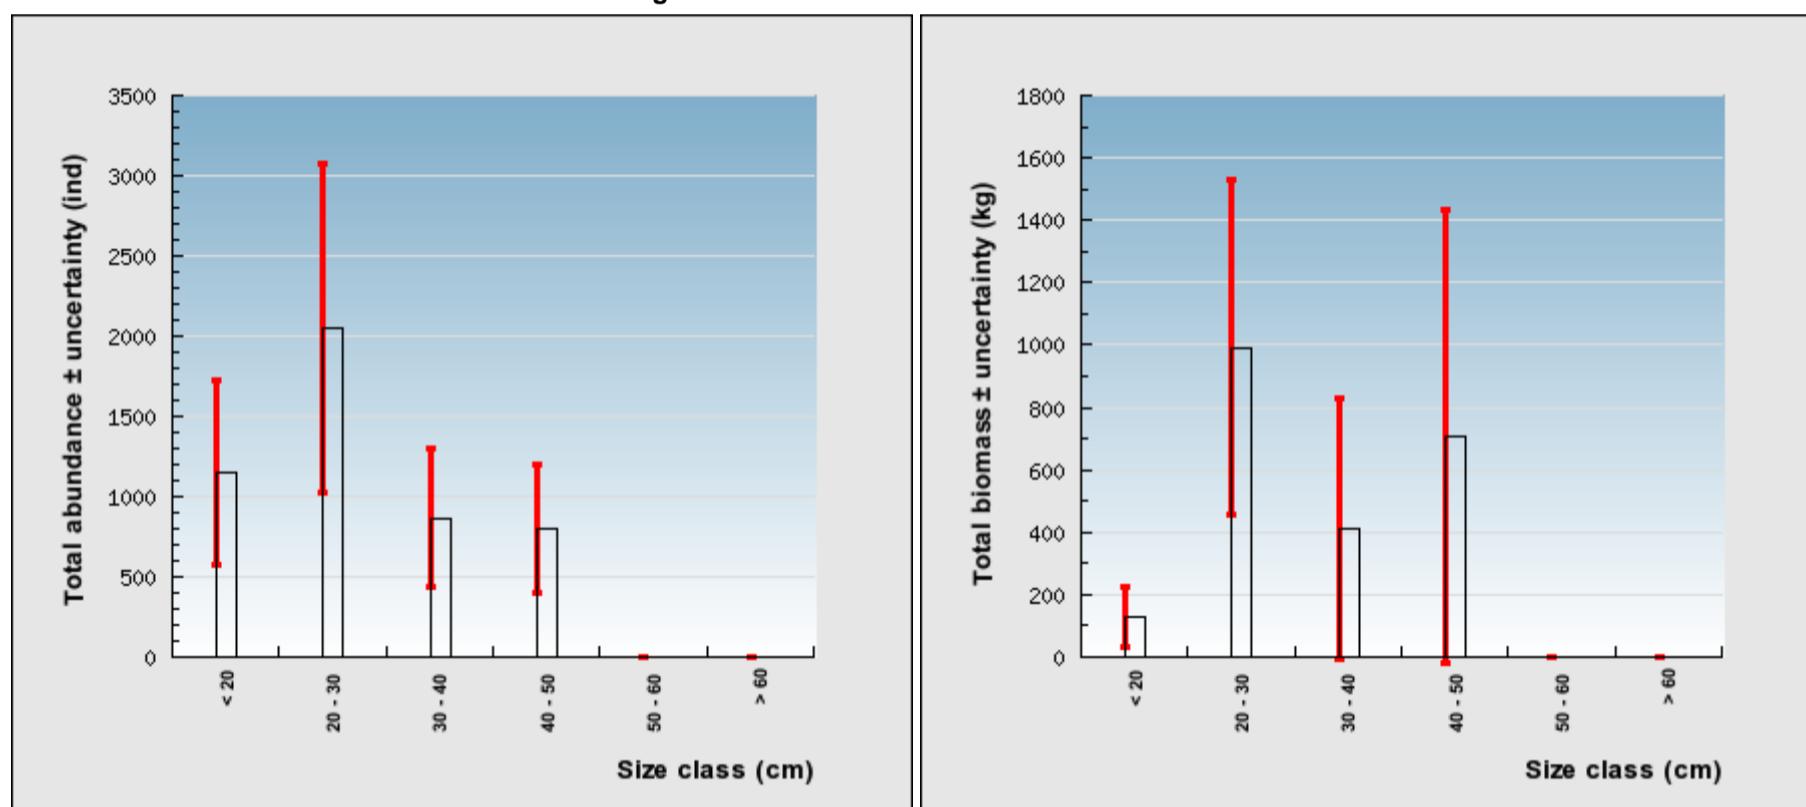

Reference indicators include biomass, abundance and density estimates.

The conservative stock biomass of all individuals is **253 kg** (wet) and the conservative total abundance is **1113 individual(s)**. This wet biomass is equivalent to **126 kg** of gutted and salted products, and **10 kg** of dried products (bêche-de-mer).

The conservative mean density estimate of all individuals is **1 individual/ha** and **0.1 kg/ha** over the selected habitat zones .

The above estimates incorporate measure uncertainty that is attributable to survey method and heterogeneous resource distribution over the survey site.
